List of sources 843

Appendix A. Key to the most frequent families 846

Appendix B. List of plant species which may be found in North Dakota 848

This checklist is the result of collaborative efforts of many people. I would like to thank Alex Radi, Andrew Albright, Briana Luxem, Craig Whippo, Dallas Diede, Dallas Fry, Jared Schumaier, Jeremy Benson, Joshua Beaudoin, Joshua Glaser, Leslie Yellowhammer, Lisa Mathwich, Liudmila Abramova, Raymond Krueger, Ryan Perry, Sara Lopez-Gietzen, Tom McKenna, Tyson Friesen, Vera Shipunova for their invaluable help in the field; to Allysa Evans, Bryan Phillips, Chigozie Anaukwu, Cody Hamm, Darin Mott, Ekaterina Shipunova, Eric Cliplef, Gerald Guala, Gursharan Kaur, Hye Ji Lee, Jacob Schillo, Jamie Council, Jason Theodore, Jennifer Asbury, Jennifer Montoya, Jessica Rosin, Jin Hee Choi, Jose Orantes, Joshua Johnson, Keila Aquilar, Leah Ronholdt, Mark Gabel, Miranda Nichols, Nevin Gillis, Rachel Alfaro, Sabrina Benarroch, Sarah Henderson, Vasily Shipunov for their help in data and herbarium management; to Karla Bredahl, Christian Keller, Christina Rust, Heidi Super, Neil Sharpe, Paul Markel, Robert Crackel, Sue Lommen, Toni Schawtz, for their help in project administration; and to Christian Beachy, David Mushet, Edward DeKeyser, Kathryn Yurkonnis, Mark Fisher, Ron Royer, William Barker for the information about North Dakota plants and wild areas.

I am also extremely grateful to the creators and maintainers of two software tools: Taxonomic Name Resolution Service and R Language and Environment for Statistical Computing which made my work on this book a lot easier and faster.

Most of fieldwork and data preparation were done with financial support from North Dakota INBRE, Prairie Biotic Research, Inc., University of North Dakota herbarium, Great Plains Center for Community Research and Service (GPCCRS) and Department of Biology of Minot State University.

Important notes

- **This is *not* a final version**. Please check for the updates regularly.
- The book is a searchable PDF. To find a plant name, you may use the search box of PDF viewer. This is also a hypertext: references in a table of context are active, you may click on them.
- If you do not find a name, it is possible that it became a synonym. For example, all *Aster* names are now replaced with *Symphyotrichum*, *Machaeranthera* and others. In the text, some synonyms are listed under accepted name, and therefore are searchable. To indicate sources contained synonyms, we use *slanted font*.
- Red color is used for the names of rare and endangered "plants at risk".
- Blue color is used for the names of North Dakota state and counties noxious weeds whereas species non-native to North America are labeled as "introduced".
- Flowering plant families are given in the accordance with the last version of my "Systema Angiospermarum" classification (`http://ashipunov.info/shipunov/ang/ang-en.htm`). The preference is given to the traditional names of families (Compositae, Gramineae etc.) instead of alternative names (Asteraceae, Poaceae etc.). All ferns are listed under "Polypodiaceae".
- Species names (scientific and common) and species concepts are given mostly in the accordance with USDA PLANTS database (2012/03/05, accessed via Taxonomic Name Resolution Service v 3.0). Some taxomic concepts were updated with the recent version of USDA PLANTS.
- Due to the nature of herbarium databases used, cultivated plants are included in the checklist. However, their distribution is not accessed completely. We tried to separate them from other plants. In the text, they marked with * star and do not have numbers and maps.
- Significant number of species do not have county data. We prefer to consider them as "questionable". In the text, they are marked with † sign and also do not have numbers and maps.
- Most of color images are field photographs directly associated with a specimens collected for Minot State University herbarium (MISU). However, due to the enormous size of data (several thousands images), **not all photographs are placed correctly**. Please send corrections to the author's e-mail dactylorhiza at gmail.com.
- All species names are supplied with color codes of flowers, cones or spore-bearing organs.
- This checklist was not planned to be an identification tool. However, we provide here the key for the identification of most frequent families (see Appendix).

93. Polypodiaceae, Ferns

All fern genera below are given under one family name, "Polypodiaceae". However, contemporary classifications of ferns recognize multiple families:

Aspleniaceae *Asplenium*

Athyriaceae *Athyrium*

Cystopteridaceae *Cystopteris, Gymnocarpium*

Dennstaedtiaceae *Pteridium*

Dryopteridaceae *Dryopteris*

Marsileaceae *Marsilea*

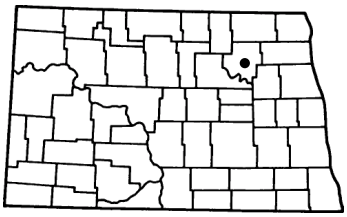
Onocleaceae *Onoclea*

Pteridaceae *Cheilanthes, Pellaea*

Thelypteridaceae *Thelypteris*

Woodsiaceae *Woodsia*

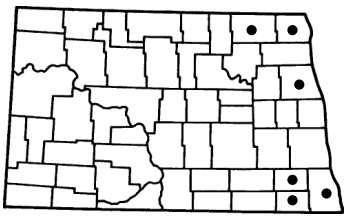
1 (1423). *Asplenium trichomanes* L., maidenhair spleenwort



Distribution. RAMSEY.

Sources: 23.

2 (1424). *Athyrium filix-femina* (L.) Roth, common ladyfern



Distribution. CAVALIER, GRAND FORKS, PEMBINA, RANSOM, RICHLAND, SARGENT.

Appendix A. Key to the most frequent families

More then a half of North Dakota flowering plants belong to the ten most frequent families. This key may help with their determination. On each step, you will need to choose among two or three variants and proceed to the next step or to the family name. Boldfaced names of families are hyperlinks, if you click on them, they lead to the relevant section of the book.

1. Inflorescence dense, flower-like head. Leaves without stipules, sometimes with milky sap. Calyx reduced to pappus or scales. Anthers united into the tube around the style. Fruit small, solid and dry achene, usually with long hairs on the top (pappus). ..... **Compositae**, Aster family

– Inflorescences with different structure ..... 2.

2. Leaves narrow, linear, alternate in two ranks, with sheath and ligules; stems cylindrical in section, internodes usually hollow. Flowers each compressed between a bract (lemma) and bracteole (palea). Flowers arranged in 2 ranks in spikelets subtended by empty bracts (glumes); spikelets themselves grouped in more complex inflorescences, usually spikes, racemes, or panicles. Seed fused to pericarp to form a one-seed dry caryopsis. .... **Gramineae**, Grass family

– Leaves narrow, linear, alternate in (usually) 3 ranks, with sheath and ligules (leaves could be reduced); stems triangular or cylindrical in section, internodes usually not hollow. Flowers reduced in many different ways, very often (sedges) the female flower is just a pistil surrounded with bag-like bract (perigynium). Flowers arranged in spikelets and/or spikes or more branched inflorescences. Seed is not fused to pericarp, the fruit is the one-seed dry nutlet. ..... **Cyperaceae**, Sedge family

= Plants have different characters ..... 3.

3. Flowers with upper an lower lips ..... 4.

– Flowers without lips ..... 5.

4. Flowers with 4 stamens. Ovary split in four parts. Leaves opposite, stems quadrangular in section. ..... **Labiatae**, Mint family

– Flowers with 10 stamens, corolla with banner (top petal) and keel (two front petals). Ovary solid. Leaves compound, with paired stipules. .... **Leguminosae**, Pea family

= Flowers labiate, but not as above .... Other families (e.g., Polygalaceae, Phrymaceae, Orchidaceae)

5 (3). Flowers showy, typically with the double perianth: calyx and corolla. Sometimes, flowers have more than 12 stamens. ..... 6.

– Flowers often inconspicuous, with the uniform perianth (greenish or colored). Flowers always with less than 12 stamens. ..... 9.

6. Flowers normally with more than 12 stamens, and often also with more than 1 pistil. . . . . 7.
– Flowers with less (usually 4, 5, 6 or 10) stamens, and always with one pistil. . . . . 8.
7. Flowers with multiple (or one) pistil(s) sitting inside a receptacle "cup" (*hypanthium*) or on the enlarged receptacle. Perianth double. Leaves with paired stipules. . . . . **Rosaceae**, Rose family
– Flowers without hypanthium (but enlarged receptacle may present). Perianth doulble or uniform. Leaves without stipules . . . . . **Ranunculaceae**, Buttercup family
= Flowers with multiple stamens, but not as above . . . . . Other families (e.g., Nymphaeaceae, Alismataceae, Cistaceae)
8 (6). Flowers with one central pistil, receptacle is not enlarged. Stamens 6, two of them are smaller than others. Leaves without paired stipules. . . . . **Cruciferae**, Mustard family
= Plants with different characters . . . . . Most of non-listed families
9 (5). Flowers often more than 3 mm in diameter, arranged in spikes or more branched inflorescences. Every node has an *ochrea*: "sleeve" which continues upward with the stem. . . . . **Polygonaceae**, Buckwheat family
– Flowers often very small, less than 3 mm in diameter, arranged in more compact inflorescences (often in glomerules). Ochrea absent. . . . . **Amaranthaceae**, Amaranth family
= Plants with small, inconspicuous, often reduced flowers, but other characters are different from above . . . . . Other families (e.g., Potamogetonaceae, Urticaceae, Juncaceae)

Appendix B. List of plant species which may be found in North Dakota

Below is a list of plants which, in accordance with USDA database, occur in Saskatchewan, Manitoba, Minnesota, South Dakota and Montana, but not in North Dakota. We also list here plant species persent in the easternmost counties of Montana (P. Lesica, pers. comm.) but absent in the bordering westernmost counties of North Dakota. Some of these plants could be found in our state.

Adoxa moschatellina
Arenaria serpyllifolia
Arnica lonchophylla
Arnica sororia
Astragalus alpinus
Besseya wyomingensis
Calamagrostis purpurascens
Calypso bulbosa
Carex canescens
Carex norvegica
Carex petasata
Centuculus minimus
Chimaphila umbellata
Crataegus macrantha
Crepis acuminata
Crypsis alopecuroides
Cryptantha fendleri
Danthonia unispicata
Diplotaxis muralis
Dodecatheon conjugens
Drymocalis arguta
Drymocalis glandulosa
Echium vulgare
Euthamia occidentalis
Goodyera repens
Hordeum geniculatum
Lathyrus tuberosus
Linum australe
Luzula multiflora
Lycopodium annotinum
Lycopodium dendroideum
Mentzelia nuda
Mertensia longiflora
Microseris nutans
Microsteris gracilis
Moneses uniflora
Nigella damascena
Nymphaea odorata
Osmorhiza chilensis
Osmorhiza depauperata
Oxytropis besseyi
Oxytropis borealis
Perideridia montana
Phacelia linearis
Phlox longifolia
Platanthera orbiculata
Polygonum viviparum
Potamogeton alpinus
Potamogeton epihydrus
Pseudognaphalium macounii
Pyrola chlorantha
Ranunculus inamoenus
Ranunculus uncinatus
Ribes lacustre
Salix lasiandra
Salix pseudomonticola
Salix ×rubens
Schedonorus arundinaceus
Sedum acre
